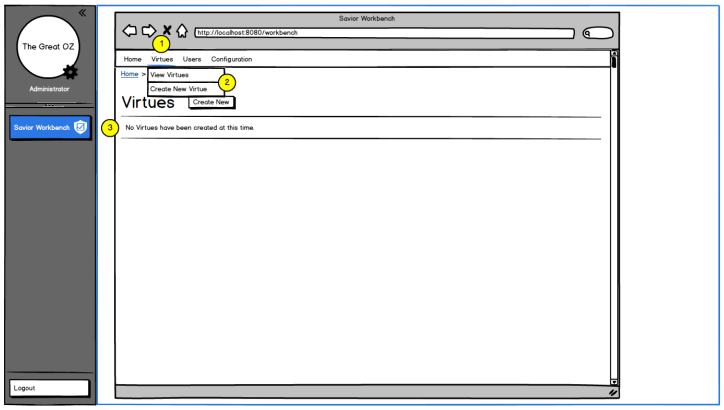
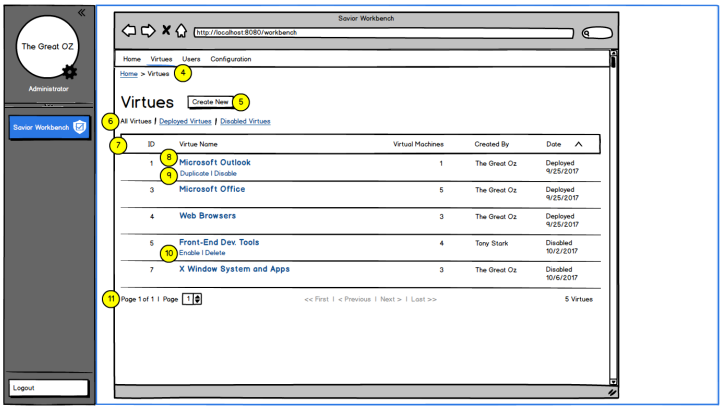
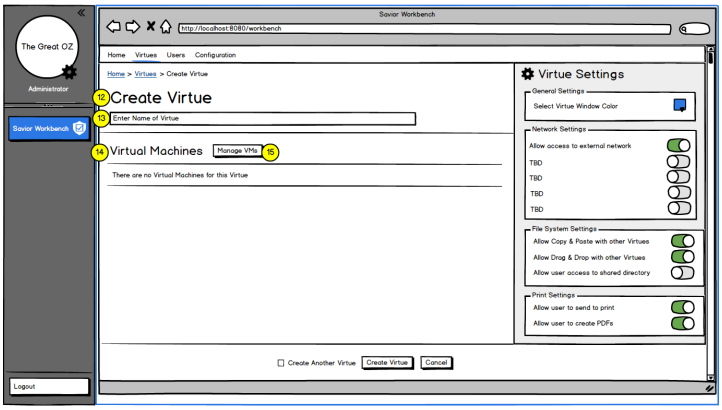
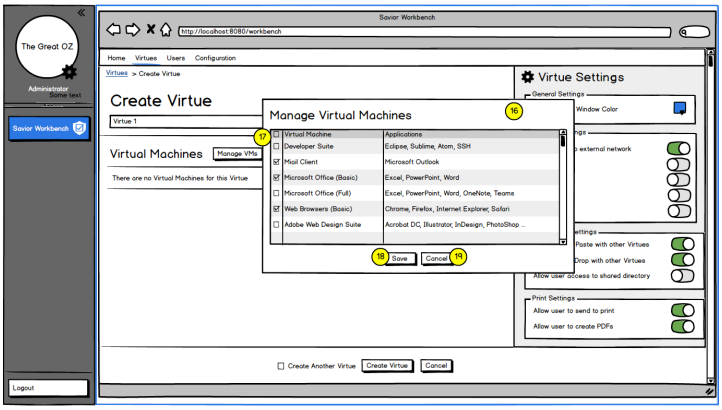
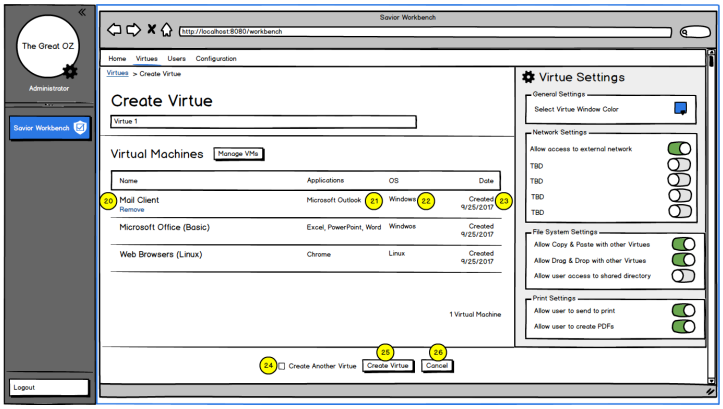
Administrator Workbench: Manage Virtues

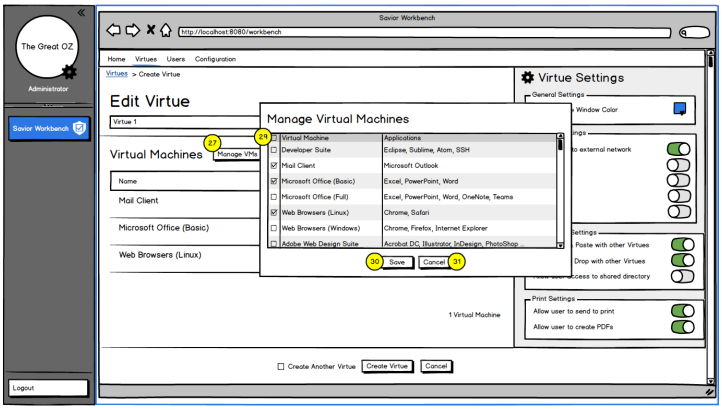












Admin Workbench: Managing Virtues

1. "Virtue" will be highlighted in the main navigation to indicate the current location in the web app.
2. When the user mouses over "Virtues" a submenu will appear giving the option to either go directly to the Virtues main page or go directly to creating a new virtue.
3. Navigating to "Virtues" using the workbench menu, the default view will be the Virtues list page. When no virtues exist, a message indicating no virtues exist will act as a placeholder until virtues have been created.
4. Breadcrumbs will provide the current location of where the user is in the web app.

5. "Create New" button will navigate to the page where a virtue template can be created. (Please see the screens for "Create a Virtue" below)
6. Default FIlters will be provided. "All Virtues" will be the default filter view.
7. The list of virtues
8. The name of the virtue will be a link that will open a page to allow the user to view details or modify the virtue.
9. When the user hovers over the link to the virtue, an options menu will appear. This options menu is for deployed virtues.
10. This options menu is for disabled virtues.
11. Pagination, Paging, and Total count of virtues will be provided for the list. Paging will be disabled if there is only one page.
12. The Create Virtue Page provides the user an interface to "build" a virtue template.
13. Field to name the virtue template
14. The "Virtual Machines" (VM) section allows the user to attach VMs to a virtue. When there are no VMs attached to the Virtue, a placeholder message will be displayed until VMs are attached. A virtue must contain at least VM to be saved.
15. To add a VM, the user will click on the Manage VMs" button.
16. A modal window will open when the "Manage VMs" button has been clicked.
17. The user will have the option to select VMs from a list of preset VMs. To add a VM, select the VM by checking the checkbox.
18. Clicking the "Save" button will add the VM(s) to the virtue.
19. Clicking the "Cancel" button will cancel the current operation and close the modal window. The user will lose all changes.
20. After the user has added VM(s) to the Virtue, the VM(s) will be listed in the table for the Virtual Machines section.
21. The VMs will show a list of the programs/applications that are available in the VM.
22. Information about the type of operating system
23. The date column will also show status of the VM.
24. The "Add Another Virute" option allows the user to add another virtue without closing and reopening the "Create Virtue" page.
25.Clicking the "Create Virtue" button will save and create the virtue. If the "Add Another VRitue" option has not been selected, the page will redirect to the main Virtues page.
26. Clicking the "Cancel" button will cancel the current operation and close and redirect to the main Virtues page. The user will lose all changes.
27. To update the list of VMs, the user can click on the Manage VMs" button.
28. A modal will open to show a list of all available VMs.
29. The will be able to select more VMs or deselect VMs using the checkboxes next to the VM on each line.
30. To save the changes made on the modal, the user must click on the "Save" button.
31. To close the modal without saving, the user will be able to click on the "Cancel" button. All changes will be lost
