Savior Desktop

Savior Desktop

Display is for 1366 x 768 monitor

1. Savior Desktop Control Panel: User preferences can be set to dock this on the left or the right side of the screen
2. Minimize or Maximize the Control Panel
3. User Avatar or Profile Picture maybe preset based on login information
4. User Preferences
5. Username & Role displayed
6. Menu of Virtues (can be resized)
7. Launched and Active Virtue (the Virtue in focus): Each virtue will be assigned a color and the corresponding button will have the same color when the virtue is launched. Each virtue will be labeled. All launched Virtues will display an icon showing that it is protected.
8. When Virtues have more than program attached to the virtue, a submenu will be made available. Each program will be able to be launched from the submenu.
9. The taskbar will host a menu of all the virtues (especially helpful when the control panel is collapsed) and will also display all the launched and active programs.

- User preferences may be set to dock the taskbar at the top or the bottom of the screen.
- 10. A list of all the launched and active programs to provide user a way to easily toggle back and forth between programs.
 - 11. Programs will be launched in its own VM. Will behave like windows. Multiple VMs can be hosted by any one Virtue.
 - 12. The launched but inactive Virtue will will display an icon to show it is protected. The color representing the Virtue will be a muted color of the button in the control panel.
 - 13. Unlaunched Virtues will not display an icon and will be a neutral color indicating it has not been launched.
 - 14. User will be able to logout of the Savior desktop, ending their session.
 - 15. Collapsed Control Panel
